

ABSTRACT OF THE DISCLOSURE

A resilient element includes interconnected lower and upper parts. The lower part includes a planar bottom segment having front and rear ends, a first curved segment 5 that curves upwardly and rearwardly from the front end of the planar bottom segment, and a second curved segment that curves upwardly and forwardly from the rear end of the planar bottom segment. The upper part includes a planar top portion having front and rear ends, a first 10 curved portion that curves downwardly and rearwardly from the front end of the planar top portion, and a second curved portion that curves downwardly and forwardly from the rear end of the planar top portion. The first curved segment and the second curved portion have 15 interconnected distal ends.
